Мойсей Антоній. Научные труды С.Ф. Мариана - новый этап в исследовании традиционной культуры и быта населения Буковины . Цель исследования заключается в попытке ввести в научный оборот широкого круга исследователей имя С. Ф. Мариана и ознакомить с его трудами заинтересованных в сфере этнографии, фольклора. **Методология** содержит исторические методы исследования и сравнительный анализ. **Новизна исследования.** Творчество и научные работы С.Ф. Мариана малоизученные в украинской историографии. Названные научные произведения охватывают жизнь человека от рождения до прилюдных похорон в традиционном обрядовом контексте, являясь одновременно первым монографическим исследованием подобного масштаба. **Выводы.** С. Ф. Мариан оставил огромное этнографическое наследство, состоящее из более 150-ти исторических и этнографических работ, большого количества рукописных материалов. Работы автора значимые для изучения буковинской этнографии. Огромный слой эмпирического материала, собранный в этом районе, имена буковинских информаторов, параллели с индоевропейскими народами, создали важное основание для дальнейшего научного поиска.

Ключевые слова: *Симион Флоря Мариан, традиционная культура, Буковина, ритуальные обряды, фольклор, этнограф.*

Introduction. Simion Floria Marian (1847 – 1907) is a famous Romanian specialist in folklore, ethnographer, historian and writer; he is a member of Romanian Academy of Sciences. He was born on September 1, 1847, in Ilisheshty village, modern Suchava county in Romania, in peasant family. He studied in Suchava elementary school and in gymnasiums in Suchava, Neseud and Beyush. He graduated Chernivtsi orthodox theological institute. Later he was working as a priest in such villages as: Dorna-Kyndreny (July 1876), Poyana Stampiy (July – October 1876), Voloka above Siret (October 1876 – May 1877) and in Siret city. In August 3, 1883, he taught religion in Suchava High orthodox gymnasium.

He was chosen to be a member of historical department in Romanian Academy of Sciences, in 1881. The King of Romania awarded him with the I degree medal “Bene-merenti” for his achievements in ethnographic researches. He obtained the prize called „Năsturel-Herescu” for his two-volumes work “Romanian national ornithology” in 1884. S.F. Marian was awarded again by the king with a medal “Romanian Crown” and officer title in 1904.

S.F. Marian has left a large ethnographic heritage, which is consisted on about 150 historical and ethnographic works, a vast amount of manuscript materials. His scientific works are dedicated to family and calendar rites, national names and terms; they were regarded as initial profound monographic investigations in Romanian literature, which were based on ethnographic material collected in Bukovyna. While analyzing works and manuscripts of S.F. Marian, it is easy to say, that he had created the real folklore and ethnographic materials archive of Bukovyna; his scientific works had placed a new stage in investigation of traditional culture

and everyday life among Bukovyna population. The scientist’s method of working also proves this, which was a new phase at the end of XIX century.

Historiography of investigation. There are collected a lot of S.F. Marian’s literature which is connected with different aspects of a problem, during more than a century period. However, Bukovinian specificity of his scientific work is not studied even in his Romanian historiography, that is felt even in monographies dedicated to him by M. Fotea and P. Leu. Ethnograph was from Bukovyna, he studied closely folklore and ethnography of his region, it had influence on his scientific work. That’s why, on our opinion, S.F. Marian’s Bukovinian specificity of ethnographic heritage must take an appropriate place in the world’s historiography.

Works of S.F.Marian are even less researched in Ukrainian historiography. It is necessary to notice the fact, that there are not all scientific works of Romanian ethnographers in national libraries of Ukraine, dating to the second part of the XIX – the beginning of the XX centuries. For example, there are only 10 works of S.F. Marian in Chernivtsi Yuriy Fedkovych National University, they are dedicated basically to the folklore. His works, which are regarded as the largest for their content and the most significant, are absent; they are dedicated to family rituals, which brought great popularity to the scientist.

Presentation of the main material. S.F. Marian has started to gather Bukovinian folklore from his early years, while studying in the third form of Suchava gymnasium. The title page of the fairytale manuscript “Soldier-Friday” indicates this, it is situated in Suchava residence-museum of S.F. Marian. During his studying in the fourth form of gym-

nasium (1866), he made his debut with the article "The Wedding in Illisheshy", printed in the "Familia" magazine. He was chosen as valid member of Romanian Academy of Sciences (1881), it was meridian point in his establishing as scientific and ethnographer. It is necessary to point out, that he has become the second Bukovinian (after E. Hurmuzaki), which was chosen as a valid member of the Academy of Sciences.

Ethnographic heritage of S.F.Marian. Among his most prominent ethnographic works are: "Chromatism of Romanian nation"¹ (1882), "Romanian national ornithology"² (1883), "Romanian national spells"³ (1886), «Romanian wedding: History-ethnographic investigation»⁴ (1890), "Romanian families: ethnographic investigation"⁵ (1892), "Romanian funerals: ethnographic investigation"⁶ (1892), "Divination, charm and their withdrawing"⁷ (1893), "Romanian holidays" (3 volumes)⁸ (1898-1901), "Insects in language, believes and customs of Romanians"⁹ (1903) and etc.

S.F. Marian has proposed innovative approach in investigation of traditional habits of Bukovyna population. For instance, his three-volumes publication, dedicated to Romanian family customs ("Romanian families", "Romanian wedding", "Romanian funerals"), had become the basis for Romanian researchers A. Gorovey and T. Pamfile. Among the works of these writers, only Marian's work was based on the Bukovinian material. The same was with his 3-volumes work "Romanian holidays", which has become the first profound monographic investigation of calendar traditions in Romanian literature. It is necessary to point on his works dedicated to mythology ("Romanian folk charming" (1886), "Divination, witchcraft and withdrawal" (1893), there was made initial attempt to classify the porters of esoteric knowledge, as well as works dedicated to folk knowledge ("Chromatic of Romanian folks" (1882), "Romanian national ornithology" (1883), "Insects in language, believes and customs of Romanians" (1903), they are the basis in forming such branches of ethnology as ethnobotany, ethnozoology, ethnomedicine and etc.

Works of S.F. Marian impress with the numerous names of birds, insects, animals, plants, home and agricultural equipment, mythology characters, traditional medicine terms and etc. Works dedicated to birds and insects include more than 1500 specific terms. There is also a large number of terms in the other his works, especially in those, connected with spelling, divination and prejudice. Due to peculiarities in his works, he was invited to pile up "The large dictionary of Romanian language", so he had to generalize lexical material from works and manuscripts published by

him. It is known, that during all his life the scientist has sent 8365 lexical terms to Bucharest; he wrote them on special cards, in chronological order.

Considerable amount of Bukovinian material is situated in appendixes to his scientific works. "Romanian wedding" contained appendix from Bukovyna and Moldova, there were: 8 farewell texts, 3 greeting speeches, 7 speeches while changing presents; in "Romanian funerals" were about 140 wails, recorded in Bukovyna and Transilvaniya. As he was a great expert in ethnic groups, living in Bukovyna, he investigated some customs and rituals which were typical not only for Romanians, but also for Ukrainians living there. He mentioned the custom of wearing flowers, weaving a day before wedding: the custom to sing various songs during weaving the wedding wreath, the custom to send monitors to beloved girl, and etc.

The group of experienced Bukovinian scientists received the invitation to take part in writing the 20th volume of Austrian encyclopedic edition "The Duchy of Bukovyna in word and painting", in 1893.

The article "Romanians" written by I.H. Sbiera and S.F. Marian was the calling card of Bukovinian Romanians among nations of Habsburg monarchy. There was a description of their material and spiritual culture, in short and informative form. There was attempt to conceptually outline the most important features of ethnographic characteristic in Romanian ethnic community in Bukovyna on 26 pages. Because of the limited extent of the article, scientists presented such problems as folk holidays, believes, clothes. Wedding ceremony, believes, customs and rituals connected with "new born" [period when guests come to see a newborn baby] and funerals were described the most completely and professionally. They also didn't miss believes connected with calendar holidays and daily traditions of Bukovinian Romanians.

Compositions of everyday life from religious life and ritualism of c Romanians were coordinated together with the artist E. Maksymovych, which he had to paint, in particular: Romanian peasant house, vechornytsi, sheepfold, peasants in traditional clothes, "Water Christening" holiday the procession with flesh of Ioan Suchavskuy, children's games, the dance "arkan", the meeting of bridegroom at bride's home, return from church wedding and dowry, covering of a bride, mourning of dead, Christmas holiday, walking with a star. Because of little extent of the article, there were published only 11 illustrations out of 14. The pictures of ritual "Sezatoare", children's games, the dance "arkan" were rejected by editorial committee and a picture of textile machine was placed in the chapter "Housekeeping".

The article "Romanians" written by I.H. Sbiera and

S.F. Marian acquainted European public with culture and everyday life of Bukovinian Romanians, created the initial notions about basic aspects of family and calendar rituals in one of the ethnic groups of Austrian province, revealing the new stage of Bukovinian ethnology investigations.

It is necessary to point out the importance of manuscript materials and documents which convey personal character, connected with S.F. Marian's life and scientific activity; they are archived in memorial-documentary fund in the house-museum of the scientific, in Suchava, (Romania). Materials and documents which are served in the museum are divided into three basic funds: manuscript, documental and correspondence. Manuscript fund is the largest one; there are unpublished ethnographic, folklore and historically-regional collections, such as: "The botany of Romanian nation", "Mythology of Romanian nation", "Youth in Romanians", 4th and 5th volumes of "Holidays in Romanians", "Animals-mammals", materials dedicated to oral folk art (collections of songs, doins, horas, ballads, mysteries, carols, fairytales, which were collected by the researcher on Bukovyna territory), historical essays (monograph is devoted to a church in Mirautsy village). There is a huge amount of materials about lifetime of S.F. Marian in the documentary fund, starting from Birth Certificate and to medicine coupons which were paid by his son Liviy after his death. Documents connected with Marian's cooperation with Academy of Sciences cause interest, in particular, his participation on Academy's meetings, his rewarding, his public activity (Scientific's election to be a member of different communities: "Community of Romanian culture and literature in Bukovyna", "Young Romania", "Dacia", "The Youth", "Community of Romanian history", his participation in writing famous Romanian and Austrian editions ("Austria-Hungary monarchy in word and picture", "Topographical and statistical dictionary of Bukovyna", "Romanian language dictionary"). Correspondence that is situated in the fund, can show us S.F. Marian's relations with other leading scientists. Epistolary heritage lets to reveal the relations with Romanians (V. Alecsandri, I.H. Sbiera, E.Nikulitse-Voronka), Austrian (M. Fridvagner), and the other European scientists (T. Kovary, A. de Gubernatis, Zh. Ulrih, I. Shukart, Ya. Yarnik). Correspondence analyze lets to make the conclusion that S.F. Marian's works had become popular far from Austria empire and Romania. Foreign specialists asked him for advice, he was regarded as one of the most competent expert of Romanian ethnology.

Considerable amount of manuscripts is situated in folklore archive of National library, in Academy of Sciences; there is S.F. Marian's Fund of manuscripts. Basically, there are his manuscripts dedicated to oral folk art and speeches which he used to speak for students of Suchava gymnasium, ethnographic studios, dedicated to peasant life ("The village", "Reusen"). Manuscript materials are perfect addition to memorial-documentary heritage of S.F. Marian's house-museum in Suchava, which exceed the amount of works printed during his life.

Methods of investigation. S.F. Marian was using various methods in the process of gathering material, such as: questionnaire, recording of material during the direct contact with informant, during his travels, with the help of his students, teacher, priests, writers, ethnographers.

The collection of large amount of information from

priests, teachers, peasants lead to the concrete territorial certification of ethnographic data with obligatory pointing on informant and village where the information was used. Unlike the other Romanian ethnographers (I.H. Sbiera, D. Dan and etc.), the scientist denoted the social status of an informant in the interlinear comments. He frequently used more than one informant from a village for checking the information.

In 1970s of the XIX century, S.F. Marian used methodological way for obtaining ethnographic information, it was almost unusual for a wide range of Romanian ethnographers. It is connected with collecting field material during a particular rite. On our opinion, S.F. Marian's usage of the direct method of investigation is a very important achievement in the process of formation the Romanian ethnography as science (the second part of XIX – the first part of XX). It gave him an opportunity to accumulate valuable documentary collection of Bukovinian folklore material.

The amount of localities and informants is impressive, while analyzing the works of S.F. Marian. For instance, in order to write "Romanian funeral", he used folklore material from 48 informants and from 30 localities in Bukovyna.

Marians' questionnaires give better opportunity to realize the aim and accumulation peculiarities of ethnographic material, which were published in the mass media: "The call to gathering customs, connected with ornithology" (1879 – 1882), and "The call to gathering material, connected with winter traditions" (1886).

Conclusions. The works of S.F. Marian are still valuable for Bukovinian ethnography investigation. Enormous layer of empirical material gathered in the area, the names of Bukovinian informants, the parallels with another Romanian provinces and Indo-European nations, classification style of his works, significant attention to customs and traditions of Ukrainians from Bukovyna created excellent base-ment for further searching. The classification of such occurrence as family, youth, wedding, funeral, were used in works of his followers: A. Gorovey ("Our family customs" (1909), "Our wedding customs" (1910), E. Nikulitsa-Voronka ("Customs and believes of Romanian nation" (1903), T. Pamfile ("Love in traditions of Romanian youth" (1903), as well as in the works of Romanian ethnographers of the next centuries. He has become a wise mentor and adviser for a large amount of scientists and ethnographers. A lot of his followers continued the subject of his investigations in their scientific activity, using his methodology and appealing to Bukovinian areal of scientific searching. most of them regarded S.F. Marian as their teacher, some of them were spreading his popularity in Europe countries.

Bukovinian ethnology material, as a countdown point in traditional culture complex of Romanian nation, has been a distinctive feature of S.F. Marian's ethnographic works in family and calendar customs. That is why his works are still valuable anthologies of folklore poems and songs, connected with family customs in Romanians from Bukovyna.

S.F. Marian's activity in cultural and national spheres of Bukovinian life hasn't been left without attention of descendants. S.F. Marian's bust was installed in the park, in front of scientist's house, with the help of Bukovinian cultural communities and former students from gymnasium; it was made in 1935, during celebration 75 years after founda-

¹⁰ Marian S. F. Botanica poporană română [The botany of Romanian nation], vol. I (A - F), ediție critică, introducere, repere biobibliografice, indice Botanica, indice capitole publicate antum, postum, text stabilit, indice informatori și bibliografie de Aura Brădățan, Editura Mușatinii, Suceava, 2008, 700 p.

tion of Suchava gymnasium "Ștefan cel Mare". There was also festival for honoring his memory (100 years from his birth); folk art and ethnology competition in 1971; festival of ethnology and folklore in behalf of S.F. Marian in 1972, where the Association of folklorists in Suchava county was established. In 1974, the house-museum was opened in honor of S.F. Marian, taking into account his important role in formation the Romanian ethnology as science and creating the real Bukovinian archive. This is a single museum dedicated to ethnography in Romania.

Moysey Antony. Scientific work of S. F. Marian as a new stage in the investigation of traditional culture and everyday life among Bukovyna population. Introduction. Simion Floria Marian is a well-known Romanian folklorist, ethnographer, historian and writer who had made a significant contribution to the traditional culture study of Bukovinian ethnos in the second half of the nineteenth century - at the beginning of the twentieth century. **The aim of the study** is to attempt introducing the scientific name of S.F. Marian in a scientific circle, to acquaint with his scientific works in the field of ethnography and folklore. **The object** of the research is the scientific works of S.F. Marian, what is devoted to the traditional culture of the Bukovina population. **Methodology.** This work uses historical research methods and comparative analysis. **Novelty of research.** Creativity and scientific work of S.F. Mariana is poorly researched in Ukrainian historiography. These scientific works covered human life from birth to public funeral in a traditional ritual context, being at the same time the first monographic study of this issue. **Conclusions.** S. F. Marian left a huge ethnographic heritage, consisting of more than 150 historical and ethnographic works, a large number of manuscripts. He conducted his ethnographic research in three main areas: 1. Family Rites: Romanian Families, Youth in Romanians, Romanian Wedding, Funeral in Romanians; 2. Calendar ritual: "Holidays in Romanians" in 3 volumes; 3. Works devoted to popular names and terms: "The

Chromatics of the Romanian people", "Romanian folk ornithology", "Romanian folk precepts", "Enemies, sorcery and their casting", "Insects in the language, beliefs and customs of the Romanians", etc. SF Marian is considered the discoverer of new areas of ethnographic research: folk chromaticism, ethnosology, ethnobotany. The author's works are important for studying Bukovinian ethnography. The enormous layer of empirical material collected in the area, the names of the Bukovinian informants, parallels the Indo-European peoples, created an important basis for further scientific research.

Key words: Simion Floria Marian, traditional culture, Bukovina, ritual ceremonies, folklore, ethnographer.

Мойсей Антоній – доктор історичних наук, професор, завідувач кафедри суспільних наук та українознавства ВДНЗ України «Буковинський державний медичний університет». Коло наукових інтересів: історія української культури, історія України, традиційна культура населення Буковини, взаємовпливи в сфері традиційної культури українського та східнороманського населення Буковини, процеси етнокультурної ідентичності в прикордонних регіонах. Автор 190 наукових праць, в тому числі 5-х монографій.

Moysey Antony – Doctor of Historical Sciences, professor, Chief of the Department of Social Sciences and Ukrainian Studies in Higher State Educational Establishment of Ukraine «Bukovinian State Medical University». Research interests: history of Ukrainian culture, history of Ukraine, traditional culture of Ukrainian population, interplay in area of traditional culture of Ukrainian and eastro-mania population of Bukovina, processes of ethnocultural identity in border regions. Author of 190 scientific publications including 5 monographs.
